If you are a health professional who works with older adults, this recently updated (2017) five-week online course will help you to acquire the knowledge and skills needed to apply an evidence-based approach to the prevention of falls and fall-related injuries. Through online, instructor-facilitated learning modules you will:

- study four to six hours per week
- learn how to design, implement and evaluate a fall prevention program

Upon course completion you should be able to:

- define the scope and nature of the problem of falls; provide fall risk identification and assessment
- employ a selection of prevention interventions reflecting evidence-based strategies
- understand social policy and context
- provide application of a program planning model evaluate the effectiveness of a fall prevention program
